

2C

Community Cluster.....2

Landscape Class.....C

Description

These counties are characterized by dense homes in the Wildland Urban Interface. The combination consists of only five counties in Nevada, Utah and California. These areas are within Fire Regime Group V and can experience infrequent, but severe fires. Primary emphasis could be on protecting communities.

Challenges and Opportunities

Vegetation and Fuels

These counties may have contiguous areas that could benefit from the use of landscape-scale prescribed fire.

Homes, Communities and Values at Risk

Local discretion should be used to determine the importance of home and community actions.

Human-Caused Ignitions

Human caused ignitions are not as great here as in other parts of the country, but may deserve attention if a local situation dictates.

Effective and Efficient Wildfire Response

Prepare for large, long duration wildfires.

Example of a Typical County

Churchill County, Nevada: Interstate 80 passes through this western Nevada county of alkali flats and isolated, sometimes forested mountain ranges.

National Priorities

Vegetation and Fuels	Moderate
Homes, Communities and Values at Risk	High
Human-Caused Ignitions	Very Low

Effective and Efficient Response:
There is high risk of large wildfires, more potential for resource benefits.
